VISITING THE SPR-C AND SPR-C200 The Dust Cover for Carter Single Point Underwing Fueling Nozzles

SPR-C

SPR-C200

PROTECTION - The Fjord Aviation Products **SPR-C** and **SPR-C200** - the best dust covers for the **Carter** single point underwing fueling nozzles, including the military D-1 and D-2. Why are they best? Simple. They have been engineered and designed to fit **ONLY** the **Carter** fueling nozzles for superior sealing and protection properties. The SPR-C is for use on all the **Carter** series of fueling nozzles EXCEPT the 64200 Series. The SPR-C200 was designed to be used on the 64200 Series.

The SPR-C200 is actually the same dust cover as the SPR-C except for the lanyard. Since the handles are completely different there is no way to attach the lanyard to the 64200 Series nozzle so a different design was needed. Result - a loop lanyard that attaches below the handle (see **SPR-C200** picture above).

When your **Carter** fueling nozzles are not in use, these dust covers not only protect against nose seal damage but seal against external water and debris from entering the nozzle. Thus another added protection against contaminants and moisture from entering the fuel systems.

A bonus feature is that it is a good check for internal residual fuel leaks - fuel in the dust cover when removed might indicate a nozzle is leaking

As for durability, the **SPR-C** and **SPR-C200** are made of a high impact absorbing urethane which are chemical resistant, flame retardant and temperature resistant from -20°F to 200° F. These dust covers meet and exceed FAA and military standards.

Prevent water, dirt or other contaminant intrusion into your fuel trucks and your customers' aircraft by using the **SPR-C** and **SPR-C200** dust covers with the **Carter**
