MODEL AFP-1836 WING MAT FOR AIRCRAFT FUELING AND ENGINE ACCESS

The Fjord Aviation Products AFP-1836 WING MAT is designed to be used when fueling with over wing aviation fueling nozzles for aircraft that have top of the wing fueling ports. This "Longer" size is great for added protection or if the fueling port is more to one side as shown below. This wing mat is the best protection for a wing with a fueling port—No scratches, No scrapes, No dings, No marks or streaks from the nozzle or hose or drips while fueling.

It is made of high impact absorbing urethane polymer and is chemical and fuel resistant and flame retardant with operating temperatures from -20° to 200°F. The mat is approximately 18" wide and 36" long with a service port of about 5" in diameter, plus 7 colors are available **Red, Light Blue, Royal Blue, Yellow, Green, Orange** and **Black**. Each wing mat is fairly light weight (approx. 4lb) and is very user friendly. There is the very smooth, shiny side that is somewhat "sticky" which is placed on the wing (reducing sliding off or blowing off) and the other side that the nozzle and hose touch is more "textured" and dull. This side even states "This Side Up" in two areas. An added bonus is that each wing mat is easily transportable and storable - rolls up and fits inside the aircraft or the cab of the refueling truck when not in use.

Why buy several "bar mats" or "tear away" protection mats when you can have the best protection for the wing of your aircraft, AFP-1836, and if properly maintained (care and maintenance sheet available on our website as well as included with every purchase) will provide protection for years.
