UPDATE: DC 4.100 **4" API Fuel Loading Adapter** **Dust Cover**

Want a *water tight vacuum sealing* dust cover for your 4" API fuel loading adapter? Look no further than the Fjord Aviation Products DC 4.100. This cover is designed to lap over the locking edge of the API adapter, not just cover the end part, thus securely and snugly fitting over the valve head surface creating a "seal tight" effect - keeping air, water and dirt from entering your fuel system.

As for durability the DC 4.100 is made of a high impact absorbing urethane polymer which is chemical resistant, flame retardant and temperature resistant from -2° to 200°F. It is non-metallic and meets or exceeds FAA and Military standards for protection and standard sealing. So whether the 4" API fuel loading adapter is in the hydrant pit, on a fuel truck or at the loading rack this is the answer to keep water and dirt from entering your fuel system (when not in use or even during flow testing).

Due to the different locations where these 4" API fuel loading adapters can be used, it is recommended that these covers be regularly inspected for softening or the beginning stages of melting and if such should start to occur then it is time to replace the dust cover.

This part has recently become an extremely costly part to manufacture due to the "unique raw materials" used exclusively in the production of the DC 4.100. Effective immediately the DC 4.100 pricing will only be available Upon Request.

Prevent air, water, dirt or other contaminant intrusion into your aviation fuel system with the DC 4.100 and help maintain *clean dry fuel*.
