Protect valuable parts—save money, prolong use life, reduce down time— a solution—The Fjord Aviation Products [TBR-239](#) protective urethane shield engineered and designed specifically for the Thiem F239 Pressure Control Coupler that mates to the 4" API hydrant valve.

The [TBR-239](#) protective shield wraps around the control elbow and is attached to the coupler with a heavy duty stainless steel band clamp. Being made of high impact absorbing, abrasion resistant urethane it absorbs an impact much like a shock absorber. An added bonus is that scrapes, nicks, cracks and dings are prevented since the [TBR-239](#) shields the control elbow from direct contact. Also it is chemical and fuel resistant and flame retardant with operating temperatures from -20° to 200° F.

Protect your F239 Pressure Control Coupler from scrapes, dings, nicks and harsh contacts and use the Fjord Aviation Products [TBR-239](#).

17-21 June 2019
