VISITING THE JET SPOUT ADAPTER

The Jet Spout to 1" round spout adapter

Shown with SFN-HG2 Handle Guard
and SFN-1.5J Spout Cover

Just what you have been looking for -- Fjord Aviation Products ADAPSJR-1 -- the cheaper way to switch from "duckbill" or "J" spout to 1" round spout when fueling jet fuel overwing.

Fjord Aviation Products ADAPSJR-1 fits over the "duckbill" end of the "J" spout thereby having the round spout end ready for action. The ADAPSJR-1 has been designed to fuel overwing jet aircraft and helicopters with the small fueling ports and fits all "duckbill" or "J" spouts for overwing nozzles manufactured by OPW, EBW, Emco Wheaton, Morrison or Whittaker-Thiem.

It has been specifically manufactured to ensure electrical continuity between the nozzle and aircraft. The design does slow down the flow rate -- 18 to 20 GPM MAX. Plus the "duckbill" or "J" spout needs to have a smooth surface and edge so a snug fit occurs to prevent any leaking.

This ADAPSJR-1 is made of durable, impact absorbing urethane-polymer and is UV, fuel and chemical resistant as well as non-combustible. No need for special tools for installation, simply slide it over the "duckbill" or "J" spout end and it is ready for service.

So, what are you waiting on -- call today and save hundreds of dollars by using our ADAPSJR-1 and stop changing metal spouts on your overwing nozzle or investing in a second overwing jet nozzle.
