VISITING THE SPR-V The Dust Cover for the CLA-VAL

Single Point Underwing Fueling Nozzle

Protection - The Fjord Aviation Products *SPR-V* - the best dust cover for the *CLA-VAL* single point underwing fueling nozzle, including the military D-1 and D-2. Why is it the best? Simple. It has been engineered and designed to fit *ONLY* the *CLA-VAL* fueling nozzle - thus it's sealing and protection properties are made to order for the *CLA-VAL* fueling nozzles.

When your *CLA-VAL* fueling nozzle is not in use, this dust cover not only protects against nose seal damage but seals against external water and debris from entering the nozzle which also helps protect fuel systems from contaminants and moisture.

Another added feature is that it is a good check for internal residual fuel leaks - if there is fuel in the dust cover when it is removed then it might be time to check the nozzle for leaks.

As for durability, the *SPR-V* is made of a high impact absorbing urethane which is chemical resistant, flame retardant and the temperature resistance is from -20°F to 200° F. It also meets and exceeds FAA and military standards.

This is also your answer to keeping water and dirt from attacking the nose seal of the nozzle while the nozzle is stowed when not in use or entering the fuel system of the aircraft during refueling.

Prevent air, water, dirt or other contaminant intrusion into your fuel trucks and your customers aircraft when using the *CLA-VAL* single point underwing fueling nozzle with the *SPR-V* dust cover and help maintain *clean dry fuel*.
